

## Project Executable Files

| Field         | Details      |
|---------------|--------------|
| Date          | 30 June 2026 |
| Project Name  | SMART LENDER |
| Project Marks | 3 Marks      |

### Project Executable Files

This section contains all executable and deployable files required for the SMART LENDER project. The project includes the complete source code, trained machine learning model, dataset, Flask application, templates, static files, and other resources required to run the application.

#### Step 1: Submission Checklist

| S.No | Item to Submit                               | Submitted |
|------|----------------------------------------------|-----------|
| 1    | Complete source code (all files and folders) | Yes       |
| 2    | README / Setup Guide                         | Yes       |
| 3    | requirements.txt / dependency file           | Yes       |
| 4    | Database schema / seed files                 | NA        |
| 5    | Environment configuration (.env.example)     | NA        |
| 6    | Deployed application URL                     | No        |
| 7    | Executable/Application Files                 | NA        |
| 8    | Dockerfile / Containerization                | NA        |
| 9    | Test files and test results                  | Yes       |
| 10   | Demo video / Walkthrough                     | Yes       |

#### Step 2: File / Folder Structure

SMART LENDER/

```

├── Dataset/
│   ├── loan_prediction.csv
│   ├── loan_prediction.xlsx
│   └── loan_prediction(1).csv
├── Flask/
│   ├── app1.py
│   └── rdf.pkl

```

- | └─ scale1.pkl
- | └─ static/style.css
- | └─ templates/index.html
- | └─ templates/result.html
- | └─ Training/
- | └─ Loan Prediction using ML.ipynb
- | └─ IBM/

### Step 3: Deployment / Access Details

| Field                       | Details                                                                                                                                                                                   |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Hosted / Deployed URL       | <a href="http://127.0.0.1:5000">http://127.0.0.1:5000</a>                                                                                                                                 |
| Login Credentials           | Not Required                                                                                                                                                                              |
| Platform / Hosting Provider | Local Flask Application                                                                                                                                                                   |
| Repository Link             | <a href="https://github.com/AP24110010414/SMART-LENDER-">https://github.com/AP24110010414/SMART-LENDER-</a>                                                                               |
| Demo Video Link             | <a href="https://drive.google.com/file/d/1Z104Unhi3O_CZzg-td4AtS5R1Box8XRZ/view?usp=drive_link">https://drive.google.com/file/d/1Z104Unhi3O_CZzg-td4AtS5R1Box8XRZ/view?usp=drive_link</a> |

### Step 4: Run Instructions

Extract the SMART LENDER project folder.

Open the project in Visual Studio Code or any Python IDE.

Install the required Python libraries (Flask, NumPy, Pandas, Scikit-learn, etc.).

Navigate to the Flask folder.

Ensure the model files (rdf.pkl and scale1.pkl) are present.

Run the application using:

```
python app1.py
```

Open the browser and visit:

<http://127.0.0.1:5000/>

Enter the loan applicant details and click Predict to obtain the loan approval prediction.

### Step 5: Known Issues / Limitations

| S.No | Known Issue / Limitation   | Workaround / Status                        |
|------|----------------------------|--------------------------------------------|
| 1    | No deployed online version | Run locally using Flask                    |
| 2    | Missing requirements.txt   | Install required Python packages manually  |
| 3    | No README documentation    | Follow the run instructions provided above |
