

No. of Functional Features Included in the Solution

Date	28 June 2026
Project Name	SMART LENDER
Maximum Marks	5 Marks

Functional Features Overview

This document lists the functional features implemented in the SMART LENDER – Loan Prediction Using Machine Learning project. The application enables users to enter loan applicant details through a web interface and predicts loan approval using a trained machine learning model. The solution is built using Python, Flask, and Scikit-learn with a modular architecture.

S.No	Feature Name	Feature Description	Module / Component	Status	Marks Contribution
1	User Input Form	Allows users to enter applicant information required for prediction.	User Interface	Done	0.5
2	Loan Applicant Validation	Validates mandatory user inputs before prediction.	Backend	Done	0.5
3	Data Preprocessing	Converts user input into the required format for the ML model.	Data Processing	Done	0.5
4	Machine Learning Prediction	Predicts whether the loan should be approved or rejected.	ML Model	Done	1.0
5	Result Display	Displays the loan approval or rejection result.	User Interface	Done	0.5
6	Flask Web Application	Connects the frontend	Flask Backend	Done	0.5

		with the machine learning model.			
7	Responsive User Interface	Provides a simple and user-friendly interface.	Frontend	Done	0.5
8	Model Integration	Integrates the trained model into the Flask application.	Backend	Done	1.0

Feature Summary

Metric	Count / Value
Total Features Planned	8
Total Features Implemented	8
Core / Must-Have Features	6
Additional / Nice-to-Have Features	2
Features Tested & Verified	8

Feature Category Breakdown

S.No	Category	Features in Category	Example Features
1	User Interface (UI)	3	User Input Form, Result Display, Responsive Design
2	Backend / Logic	3	Input Validation, Flask Routing, Model Integration
3	Database / Storage	0	Not used in current version
4	API / Integration	1	Flask with ML model
5	Security / Authentication	1	Basic input validation
